Assisted Relearn Kit - MITSUBISHI

How the ASSISTED Relearn Works

- Inflate each tire to the proper placard pressure
- Read the TPMS sensors in each of the four wheels
- Connect your Tech500, 400SD or 400+ to the OBDII port
- Turn ignition to Key ON Engine OFF
- Follow the instructions on the tool

Low Cost Adaptor

No extra tool required!

Make-Model-Year Look Up Fast and Easy!

Bartec Design

Bartec made the Mitsubishi Assisted Relearn simple and inexpensive. Since Bartec works with the automotive OE manufacturers, we understand how the vehicle TPMS operates and made the process flexible and accurate.

While a second activation tool makes the relearn process faster, it is NOT required.

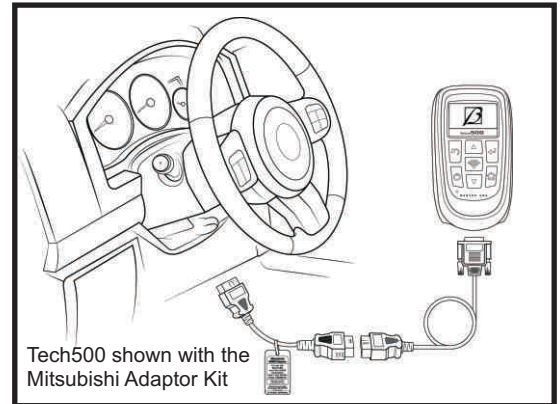

With the Bartec Assisted Relearn, you can simply lower the tire pressure to force the sensors to transmit and complete the relearn.

- Print a final audit report
- Confirm correct sensors programmed
- Read and Clear DTC's and turn off the light

Approved Activation Tools - for optional method

Certified to work with this range of Bartec produced TPMS Activation tools as well as Bartec Combination tools Tech500, Tech400SD and Tech400.

Tech500 shown with the Mitsubishi Adaptor Kit

Two Activation Methods

1. Activation tool
2. Reduce Pressure
