## TECH500

with CUBELEC Programming Fixture

### The first INTEGRATED Programming Solution for CUB Style Aftermarket Sensors.

Bartec, the first to deliver "At-The-Wheel" TPMS Sensor programming has again created another market leading solution. **The Cub Programmer for the Tech500 is the latest programming innovation from Bartec.**

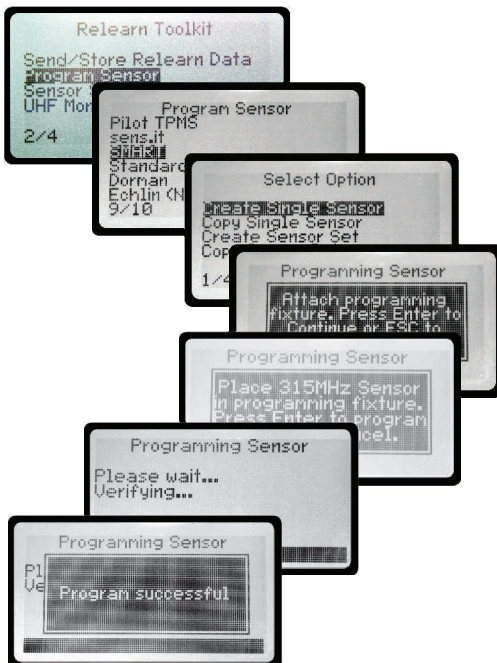

When connected to a Tech500 tool [with R51 or later installed] a technician can easily program and validate any of the CUB style Sensors like: Smart Sensor, Multi-fit Sensor, Uni-Sensor, and the Pilot Sensor. Because the Tech500 has superior diagnostic and relearn capability, this solution is much better and more cost effective than the "free programmer option!"

### Features of the Tech500 Cub Programmer:

- ☑ Integrated design, fit and function
- ☑ Combines at-the-wheel programming with industry leading OBD function
- ☑ Validates the programmed sensor PRIOR TO INSTALLATION
- ☑ Intuitive and easy to use Programming method
- ☑ Works on all CUB variant sensors
- ☑ All backed by the very best in class TPMS Technical Support team!

### Easy and Intuitive Menu Flow!

### Integrated Design!

### Works with both styles of sensors!

**Bartec has combined more aftermarket sensor programming technology with the industry leading TPMS Diagnostic and Repair Tool, which means you can fix MORE CARS!**

**Part Number: WRT500CPF-002**

Programming Fixture kit includes:

- Cub Programming Fixture
- Quick Start Guide
- Sensors sold separately
